Ample A Tool For Exploring Morphology:

AMPLE David J. Weber, H. Andrew Black, Stephen R. MacConnel, 1988 *Morphology and Computation* Richard William Sproat, 1992 This book provides the first broad yet thorough coverage of issues in morphological theory It includes a wide array of techniques and systems in computational morphology including discussion of their limitations and describes some unusual applications Sproat motivates the study of computational morphology by arguing that a computational natural language system such as a parser or a generator must incorporate a model of morphology He discusses a range of applications for programs with knowledge of morphology some of which are not generally found in the literature Sproat then provides an overview of some of the basic descriptive facts about morphology and issues in theoretical morphology and lexical phonology as well as psycholinguistic evidence for human processing of morphological structure He takes up the basic techniques that have been proposed for doing morphological processing and discusses at length various systems such as DECOMP and KIMMO that incorporate part or all of those techniques pointing out the inadequacies of such systems from both a descriptive and a computational point of view He concludes by touching on interesting peripheral areas such as the analysis of complex nominals in English and on the main contributions of Rumelhart and McClelland's connectionism to the computational analysis of words

Morphologie G. E. Booij, Christian Lehmann, Joachim Mugdan, 2000 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation To attain these objectives the series will aim for a standard comparable to that of the leading handbooks in other disciplines and to this end will strive for comprehensiveness theoretical explicitness reliable documentation of data and findings and up to date methodology The editors both of the series and of the individual volumes and the individual contributors are committed to this aim The languages of publication are English German and French The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks however no inflexible pre set limits will be imposed on the scope of each volume The series is open ended and can thus take account of further developments in the field This

conception coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care means that there is no set time table for the publication of the whole series Each volume will be a self contained work complete in itself The order in which the handbooks are published does not imply any rank ordering but is determined by the way in which the series is organized the editor of the whole series enlist a competent editor for each individual volume Once the principal editor for a volume has been found he or she then has a completely free hand in the choice of co editors and contributors The editors plan each volume independently of the others being governed only by general formal principles The series editor only intervene where questions of delineation between individual volumes are concerned It is felt that this modus operandi is best suited to achieving the objectives of the series namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume
