God, Evolution & Science William Stolzman, 2020-04-23 God Evolution Science How Our World Evolved from God presents a new approach for linking God energy and our material world in an evolutionary way Energy is conservative and it exists in two forms potential and kinetic Scientists have well established that our physical world began as a singular kinetic Big Bang Consequently before that event there had to exist a singular potential energetic reality which I name the Almighty This potential reality is forward leaning and thus has the unidirectional dimension of time which must also be quantized Since energy is oriented toward establishing systems the Almighty must also have a systemic aspect

The author establishes that evolution is not only biological but logical He shows how from the Almighty logically evolved a quantized bidirectional four dimensional field By progressively breaking the symmetries of this field he is able to show how the four forces of physics logically evolved He subsequently shows how our world as we observe it today logically evolved from the Almighty Whether this Almighty is impersonal or personal is discussed at length Finally the author also shows that beyond the entropic decay of our world our physical world will end a Big Collapse Nonetheless because energy is conservative and eternal the author shows how there remains the logistical possibility of a transcendently evolved afterlife in the Almighty
