Pseudodifferential Analysis on Conformally Compact Spaces Robert Lauter, 2003 The 0 calculus on a manifold with boundary is a micro localization of the Lie algebra of vector fields that vanish at the boundary It has been used by Mazzeo Melrose to study the Laplacian of a conformally compact metric      *Descriptive Catalogue of the Preparations in the Museum of St. Thomas's Hospital* , 1859      Approaches to Singular Analysis Juan B. Gil, Daniel Grieser, Matthias Lesch, 2012-12-06 The purpose of this publication is to present in one book various approaches to analytic problems that arise in the context of singular spaces It is based on the workshop Approaches to Singular Analysis which was held on April 8 10 1999 at Humboldt University of Berlin The aim of this workshop was to bring together young mathematicians interested in partial differential operators on singular configurations The main idea was to look at different approaches that have been proposed and try to understand to which extent they overlap and how they differ The workshop took place in a rather relaxed atmosphere The participants appreciated that there was a discussion session every day which gave a lot of room for an open exchange of ideas This book contains articles by workshop participants and invited contributions The former are expanded versions of

talks at the workshop they give introductions to various pseudodifferential calculi and discussions of relations between them In addition we invited a limited number of papers from mathematicians who have made significant contributions to this field Unfortunately several of these invitations were turned down due to other commitments For this reason only a very small number of contributions from non participants remain The absence of any particular name from the list of invited contributors should not be interpreted as a bias of the editors against that scientist It rather reflects our restricted choice of invitations due to lack of space
