

This comprehensive book provides the reader with the core skills regarding data analysis and the application of algorithms. The book helps the reader establish a transition from equations to the source code related to algorithms and from the interpretation of results to draw meaningful information about data within the real domain and virtual domain. Specific applications of data analysis algorithms and detailed description of the main concepts for extracting knowledge from data are presented. In particular, the book shows how to use these algorithms for diagnosis and prognosis in several medical fields, and for prognosis and forecasting in economy. The multidisciplinary approach includes data mining algorithms, financial probability statistics, image processing, machine learning, robotics and perception, and economy. Combining theory and applications, this book intends to enhance knowledge and facilitate learning through the use of linear and non-linear models, decision trees, naive Bayesian classifier, support vector machines, k-Nearest Neighbors, artificial neural networks algorithms as well as hybrid and evolutionary methods with Artificial Neural Networks (ANN). The intended audience of this book are undergraduates and postgraduate students, scholars, researchers and practitioners.

• Combines theory and applications in several fields.
