**Computer-Based Testing** Craig N. Mills, Maria T. Potenza, John J. Fremer, William C. Ward, 2005-04-11 Although computer based tests CBT have been administered for many years improvements in the speed and power of computers coupled with reductions in their cost have made large scale computer delivery of tests increasingly feasible CBT is now a common form of test delivery for licensure certification and admissions tests Many large scale high stakes testing programs have introduced CBT either as an option or as the sole means of test delivery Although this movement to CBT has to a great extent been successful it has not been without problems Advances in psychometrics are required to ensure that those who rely on test results can have at least the same confidence in CBTs as they have in traditional forms of assessment This volume stems from an ETS sponsored colloquium in which more than 200 measurement professionals from eight countries and 29 states convened to assess the current and future status of CBT The formal agenda for the colloquium was divided into three major segments Test Models Test Administration and Test Analysis and Scoring Each segment consisted of several presentations followed by comments from noted psychometricians and a break out session in which presenters and discussants identified important issues and established priorities for a CBT research agenda This volume contains the papers presented at the colloquium the discussant remarks based on those papers and the research agenda that was generated from the break out sessions Computer Based Testing Building the Foundation for Future Assessments is must reading for professionals scholars and advanced students working in the testing field as well as people in the information technology field who have an interest in testing *Computer-Based Testing* Martha Thurlow, Sheryl S. Lazarus, Debra Albus, Jennifer Hodgson, 2010 Computer based testing CBT has emerged as one of the recent innovative approaches to assessments most pursued by states CBT is lauded as the answer to having cheaper and speedier test delivery for state and district wide assessments It is also seen by some as an avenue toward greater accessibility for students with disabilities In this report the authors explore the context of CBT current state computer based tests and considerations for students with disabilities in part as follow up to a similar exploration that occurred in the early 2000s when just a few states were beginning to develop and implement CBT for their state assessments Nine considerations for states and districts are presented 1 Consider the assumptions and beliefs of various stakeholders about computer based instruction and assessments 2 Consider the system as a whole from the computer infrastructure to classroom and instructional experiences with computers before deciding whether and how to use CBT 3 Consider the computer or online platform first with input from individuals who know students with disabilities and their accessibility needs 4 Consider a process for bringing in the needed expertise to delineate the specific accessibility features of CBT and to determine what specific accommodations may still be needed by students with disabilities as well as to determine whether a computer based test may create new accessibility issues 5 Determine the policies for which accessibility features will be available to all students and which are designated for specific groups of

students such as students with disabilities 6 Consider how to track the use of accessibility features incorporated into CBT design 7 Field test the accessibility features of the computer based test at the same time that the computer based test is field tested 8 Examine results from CBT for students with disabilities to determine whether there are any features or characteristics of the assessment that might need reconsideration and 9 Develop training for teachers and students to ensure that students benefit from accessibility features Appendices include 1 Advantages and Challenges of Computer based Tests CBTs 2 Computer based Tests Specifications and Details and 3 Web Sites used in Analysis of States Computer based Tests Contains 1 figure and 9 tables

**Random Question Sequencing in Computer-based Testing (CBT) Assessments and Its Effect on Individual Student Performance** Anthony Michael Marks, 2013 This research is important because it has identified a gap in the existing knowledge base A term is therefore coined to label a computer based test mode effect the so called Item Randomisation Effect discussed in detail in this thesis Item Randomisation Effect is a test mode effect occurring in computer based testing contexts especially noticeable in test takers that may be susceptible to test anxiety The practise of randomising multiple choice items in computer based test

venues is commonplace mainly as a deterrent for cheating Previous research attempted to determine the degree of equivalence across testing modalities of any test The need was to ensure test takers in paper based tests would not have an advantage disadvantage over test takers given the same test in a computer based mode Such studies have a nomothetic perspective This research contrasts with those earlier studies in that it has an ideographic perspective because it is concerned with the performance of individuals taking any test in the computer based modality This subtle difference in perspective may account for the apparent gap in the existing educational research literature Evidence of Item Randomisation Effect was found in this study but further research into this test mode effect is necessary *Journal of Computer-based Instruction* ,1982
