

COMPUTER SEDIMENTARY SIMULATION MODELS SEQUENCE STRATIGRAPHY

Christopher G. St. C. Kendall, Gregory L. Whittle, Robert Ehrlich
Philip D. Moore, Robert L. Cannon, Douglas R. Hellmann
University of South Carolina, Columbia, S.C.

A basic challenge in analyzing sedimentary basins is to determine three-dimensional stratigraphy from a limited set of observations. The StratMod Group at the University of South Carolina has developed a software package called Sedpak that uses an empirical approach for stratigraphic prediction via graphic simulation.

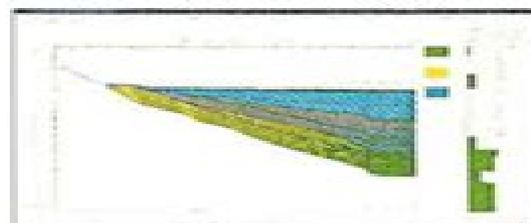

Sedpak has been used by oil companies to analyze the stratigraphic suc-

cessions of basins in many regions of the world. It enables large amounts of data to be handled quickly and complex outcomes to be stored efficiently. Moreover, the assumptions driving the simulation can be systematically

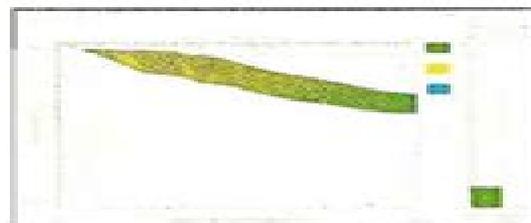

assessed in terms of validity and completeness.

Sedpak has a strong sequence-stratigraphic flavor, resembling in that sense the simulation procedures of Lawrence et al.¹ Following the ap-
