simple and trivial one has to face the problem to determine the allowable deviations of the system functions and the
optimal vector of system parameter tolerances The need for the solution of this problem is stimulated with various serious
economic and maintenance aspects between them the tendency to reach the minimal production cost the maximal system
operation reliability are the most frequent Suppose that we are dealing with an system S consisting of N components
represented by the system parameters $x_i, i = 1, 2, \dots, N$ which are arranged in certain structure so that the K system functions F_k
 $k = 1, 2, \dots, K$ expressing the considered system properties fulfill the condition $F \in FO \cap AF$ There $F \in F_k$ is the set of the actual
system functions $FO \cap FO_k$ is the set of the nominal system functions and $AF \cap AF_k$ is the set of the allowable
system functions The set F depends besides the system structure also on the vector $X = (x_i)_{i=1}^N$ of the system
parameters Suppose that the system structure is invariant **COMPSTAT 1984** T. Havranek,Z. Sidak,M. Novak,2013-06-29
