 data transports TTAs function through programming the data transports themselves As a result the new architecture
 alleviates bottlenecks allows for new code generation optimizations and exploits hardware more efficiently Founded on the
 author s recent research this book evaluates the attributes of different classes of architectures It demonstrates how TTAs can
 be used as a template for automatic generation of application specific processors and highlights their suitability for
 embedded system design Several commercial TTA implementations have proven its concepts and advantages Features
 includes Complexity analysis of the data path of Instruction Level Parallel processors particularly of VLIW Very Long
 Instruction Word and super pipelined processors Derivation of the transport triggering concept illustrating processor
 simplification In depth analysis of the architecture design space of TTAs and evaluation of architecture parameters
 Examination of the control and pipelining of instruction function and register units Description of a trajectory for the
 automatic synthesis of TTAs for arbitrary applications written in a high level language Detailed description of a prototype
 TTA processor enabling the reader to design an embedded computer system with excellent cost performance ratio
 Microprocessor Architectures is cutting edge text which will prove invaluable to both industrial hardware and software
 engineers involved in embedded system design and to postgraduate electrical engineering and computer science students
