Horecker, Earl R. Stadtman, 2014-06-28 Current Topics in Cellular Regulation Volume 28 is a collection of papers that deals with enzyme enzyme interactions regulation of metabolic reaction pathways the relevance of intracellular amino acid pool in the regulation of protein metabolism and the production of superoxide by phagocytic leukocytes Other papers discuss the regulation of adrenergic receptor function by phosphorylation a membrane bound metallo endopeptidase neprin as well as the covalent modification as a mechanism of marking proteins for degradation One paper notes that the transfer pathway involving enzyme enzyme recognition is associated with molecular specificity features over those demanded by the molecular structural constraints of the individual enzyme sites The Albery and Knowles principle under certain conditions shows that intermediary metabolites within a particular pathway exist in states of nearly equal free energy One paper describes that the

amino acid pool size and content are governed by the conditioning of intracellular proteins and the metabolic activity of the cell. The paper also suggests that intracellular pools do not regulate protein metabolism. The collection can prove beneficial for biochemists, microbiologists, cellular researchers, and academicians involved in the study of cellular biology or physiology.

**Current Topics in Cellular Regulation** Bernard L. Horecker, Earl R. Stadtman, 2014-06-28. *Current Topics in Cellular Regulation* Volume 17 deals with the basic mechanisms involved in the regulation of diverse cellular activities. This book discusses the regulation of proteinase inhibitor accumulation in excised tomato leaves, inhibitors associated with cysteine proteinases, and stimulation of DNA synthesis in quiescent cultured cells. The regulation of the biosynthesis of RNA polymerase subunits, molecular consequences of formyl peptide binding, and instability versus homeostasis in cell energy metabolism are also elaborated. This text likewise covers the physiological significance of desensitization and cooperation between nuclear and mitochondrial genetic systems. This volume is beneficial to biologists and researchers concerned with advances in the general area of cellular regulation.

*Current Topics in Cellular Regulation (majalah) Biological Cycles (majalah)*. Bernard L. Horecker, 1968. *Biological Cycles* Ronald W. Estabrook, Paul A. Srere, 2013-10-22. *Current Topics in Cellular Regulation* Volume 18. *Biological Cycles* covers topics on the events of molecular biology, cellular communication, and the merging of cell structure to biochemical function. The book discusses the ornithin-urea cycle, the cycles of glutathione metabolism and transport, and the role of multienzymatic proteins in mammalian pyrimidine biosynthesis. The text also describes the significance of interconvertible enzyme cycles in cellular regulation: regulation of mammalian pyruvate dehydrogenase complex by a phosphorylation-dephosphorylation cycle, replenishment of citric acid cycle intermediates by the purine nucleotide cycle in rat skeletal muscle, the control of a secondary pathway of ethanol metabolism by differences in redox state, the role of aldolase and fructose biphosphatase in the control of gluconeogenesis and glycolysis, and the fructose 6-phosphate-fructose 1,6-bisphosphate cycle. The book further tackles the cycles in polysaccharide biosynthesis and other important biological cycles. Biologists, microbiologists, cellular biologists, and biochemists will find the book invaluable.

*Current Topics in Cellular Regulation* Bernard Leonard Horecker, Earl R. Stadtman, 1981. *Modulation by Molecular Interactions* Rodney L. Levine, Ann Ginsburg, 2013-10-22. *Current Topics in Cellular Regulation* Volume 26. *Modulation by Molecular Interactions* covers various aspects of biochemical regulation that were presented in the International Symposium on the Molecular Basis of Cellular Regulation held at the National Institutes of Health on May 3-5, 1984. The book discusses the coordination and control of cellular metabolism and function, focusing on modulation by molecular interactions. Biochemists, molecular biologists, geneticists, microbiologists, and physiologists will find the book invaluable.

[Current Topics in Cellular Regulation](#) Bernard Leonard Horecker, 1984. **Current Topics in Cellular Regulation** Bernard Leonard Horecker, [Principles of Metabolic Control in Mammalian Systems](#) Herman, 2013-11-11. In this work we present the basic

principles of metabolic control which we hope will serve as a foundation for the vast array of factual matter which the biochemist and the physician engaged in metabolic research must accumulate Accordingly we attempt to set forth these principles along with sufficient explanation so that the reader may apply them to the ever expanding literature of biochemistry If we are successful this will provide a theoretical approach which can be applied to any given set of metabolic reactions It is impossible to enumerate each and every biochemical reaction and pathway since such a work would be too unwieldy for efficient use Rather we hope our presentation of the principles of metabolic control will be sufficiently basic to be of lasting usefulness no matter how detailed biochemistry may become We would like to be able to condense biochemistry into a theoretical biology that will not only allow for the general treatment of any given reaction but will enable predictions to be made as to the existence of necessary pathways and the consequences of altered control Such is not possible today but this may be accomplished in the future We believe it is now possible to institute the beginnings of such a theoretical biology

**Current Topics in Cellular Regulation**, 1984      **Cell Chemistry and Physiology: Part I** Edward Bittar, 1996-01-04

This is the first of a 4 volume module that is an introduction to the study of cell chemistry and physiology It is not intended to be encyclopedic in nature but rather a general survey of the subject with an emphasis on those topics that are central to an understanding of cell biology and those that are certain to become of increasing importance in the teaching of modern medicine We have followed what appeared to us to be the logical divisions of the subject beginning with proteins Allewell and her colleagues stress the point that proteins fold spontaneously to form complex three dimensional structures and that some of them unfold with the help of proteins called chaperones Michaelis Menten kinetics are shown by Nelsestuen to describe the behaviour of enzymes in the test tube The formalism is particularly useful in the search for agents of therapeutic value as exemplified by methotrexate Uptake by mammalian cells of substrates and their metabolic conversions are discussed by van der Vusse and Reneman However both Welch and Savageau expound the view that the cell is not simply a bagful of enzymes The biologist is urged by Savageau to abandon Michaelis Menten formalism and apply the Power Law The biologist is also told that the approach to arriving at a theory of metabolic control would have to be one of successive approximations requiring the use of the computer Information gained from comparative biochemistry is shown by Storey and Brooks to have shed new light on mechanisms of metabolic rate depression and freeze tolerance and to be applicable to organ transplantation technology We are reminded that enzyme adaptation is partly the result of the presence of a hydrating shell of vicinal water that stabilises conformation of the enzyme Vicinal water according to Drost Hausen and Singleton lies adjacent to most solids and protein interfaces The kinks or breaks observed in the slope of the Arrhenius plot are attributed to structural changes in vicinal water Regulation of cell volume is shown by Hempling to involve regulation of cell water It could be that the osmo receptor or volume detection system is a protein that links the cytoskeleton to specific K and C1 channels Additionally it is interesting that aquaporins which are water channel forming membrane proteins are now known

to exist in both renal and extra renal tissues One of the renal porins is affected by vasopressin We then pass on to protein synthesis Rattan and other important topics including protein glycosylation Hounsell methylation Clarke ADP ribosylation Pearson and prenylation Gelb Among the four types of lipids attached to membrane proteins are the prenyl groups Ford and Gross in their chapter on lipobiology drive home the point that there is an accumulation of acyl carnitine and lysophospholipids during myocardial infarction

**Cellular Bioenergetics: Role of Coupled Creatine Kinases** Valdur A. Saks, Renée Ventura-Clapier, 2012-12-06 Most of the information on the functional role structure and molecular biology of creatine kinase is scattered in several hundreds of publications The editors of this volume invited all authors who are most active at present in experimental research on creatine kinases to summarize their work and make the information easily available to a wider scientific audience especially to young investigators who are entering this field Since the functional role of coupled creatine kinases is directly related to the phenomenon of compartmentation and structural organization of metabolic networks we also invited experts in the related areas to contribute to the volume Almost all invited authors responded enthusiastically and the results of this collective work are presented here For biochemists biophysicists physiologists and medical research workers
