Ireland's Sea Fisheries, 1400-1600 Patrick W. Hayes,2023 This book examines the environmental political and economic history of Ireland s marine fisheries from 1400 to 1600 It combines a wide range of historical sources with innovative digital research methods to provide a comprehensive and systematic overview Government letters and court documents highlight the diverse range of fishing fleets from across Europe that visited Irish waters in the early sixteenth century bringing wealth and cultural influence to the native Irish who developed complex systems to protect and tax the visitors Furthermore trade records illustrate that fish was Ireland s

premier export in the late fifteenth and early sixteenth centuries. However, a range of factors led to the industry's collapse by the end of the sixteenth century: the Tudor conquest, which disrupted fishing operations and fundamentally altered who controlled fishing resources; the destabilization of Irish waters resulting from the terrestrial conflict which allowed pirates to thrive; an influx of cheap cod from the newly exploited fisheries in Newfoundland which changed consumption patterns in Ireland and across Europe; and shifting climatic conditions and decades of over-exploitation which meant fewer fish and poorer catches. Overall, the book reveals that fisheries form a vital part of the broader environmental, political, and economic history of Ireland.

Advanced Excel for Scientific Data Analysis Robert De Levie, 2008. Combining an easy-going style with an emphasis on practical applications, this greatly expanded second edition is remarkable in scope and coverage. As reviews of the first edition noted, the term "advanced" in the title is not used lightly. Less than a third of its 700 pages are devoted to least squares analysis, yet the reader will learn about many aspects of this ubiquitous method that are seldom found together in one volume: multivariate and polynomial centering, the statistical uncertainty in uncertainty estimates, how to use the covariance singular value decomposition, the pros and cons of weighted least squares, moving equidistant least squares, nonlinear least squares, and

imprecision contours There are lucid chapters on Fourier transformation convolution and deconvolution and digital simulation of ordinary differential equations A new chapter is devoted to some common but often only crudely used mathematical methods such as numerical differentiation Romberg integration and cubic spline interpolation Another new chapter shows how to use linear algebra on the spreadsheet with Volpi's extensive matrix toolbox of custom functions and macros A third newly added chapter describes how to set up the spreadsheet to make it less error prone and how to get superaccurate answers in Excel The substantially enlarged chapter on writing functions and macros now has a set of MacroMorsels to illustrate specific points that otherwise might trip up novice programmers and a detailed description of Excel's extensive debugging tools All this is presented in an easily digestible format illustrated with many examples from the literature and supported by a large collection of open access i e fully transparent and user modifiable custom functions and macros
