Craft Of Programming:

Coders at Work Peter Seibel, 2009-12-21 Peter Seibel interviews 15 of the most interesting computer programmers alive today in *Coders at Work* offering a companion volume to Apress's highly acclaimed best seller *Founders at Work* by Jessica Livingston. As the words at work suggest Peter Seibel focuses on how his interviewees tackle the day to day work of programming while revealing much more like how they became great programmers how they recognize programming talent in others and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the *Coders at Work* web site www.codersatwork.com. The complete list was 284 names. Having digested everyone's feedback we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen Pioneer in optimizing compilers first woman to win the Turing Award 2006 and first female IBM fellow; Joe Armstrong Inventor of Erlang; Joshua Bloch Author of the Java collections framework now at Google; Bernie Cosell One of the main software guys behind the original ARPANET IMPs and a master debugger; Douglas Crockford JSON founder JavaScript architect at Yahoo; L. Peter Deutsch Author of Ghostscript implementer of Smalltalk 80 at Xerox PARC and Lisp 1.5 on PDP 1; Brendan Eich Inventor of JavaScript CTO of the Mozilla Corporation; Brad Fitzpatrick Writer of LiveJournal OpenID memcached and Perlbal; Dan Ingalls Smalltalk implementor and designer; Simon Peyton Jones Coinventor of Haskell and lead designer of Glasgow Haskell Compiler; Donald Knuth Author of *The Art of Computer Programming* and creator of TeX; Peter Norvig Director of Research at Google and author of the standard text on AI; Guy Steele Coinventor of Scheme and part of the Common Lisp Gang of Five currently working on Fortress; Ken Thompson Inventor of UNIX; Jamie Zawinski Author of XEmacs and early Netscape Mozilla hacker.

The Craft of Computer Programming Craig Jensen, 1985 A clearly written introduction to programming that covers principles and gives summaries on each of the languages.

Tech Craft Texas Harmon, 2023-11-26 *Tech Craft* Tracing the Development of Programming Languages. This book is intended not just for programmers and computer science enthusiasts but for anyone curious about the evolution of digital languages and their impact on our lives. Whether you are a seasoned developer or new to the world of programming *Tech Craft: The Development of Programming Languages* offers a comprehensive and accessible insight into the languages that have become the backbone of modern technology. This book also covers some popular markups and protocols. As you embark on this enlightening exploration we hope to increase your knowledge and awareness of these programming languages not just as tools of technology but as vibrant evolving entities that continue to drive innovation and open new horizons in the realm of software development. Welcome to a journey through the history evolution and enduring impact of the world's most significant programming languages.

The Secret Life of Programs Jonathan E. Steinhart, 2019-08-06 A primer on the underlying technologies that allow computer programs to work. Covers topics like computer hardware combinatorial logic sequential logic computer architecture computer anatomy and Input Output. Many coders are unfamiliar with the underlying technologies that make their programs run. But why should you

care when your code appears to work Because you want it to run well and not be riddled with hard to find bugs You don't want to be in the news because your code had a security problem Lots of technical detail is available online but it's not organized or collected into a convenient place In *The Secret Life of Programs* veteran engineer Jonathan E Steinhart explores in depth the foundational concepts that underlie the machine Subjects like computer hardware how software behaves on hardware as well as how people have solved problems using technology over time You'll learn How the real world is converted into a form that computers understand like bits logic numbers text and colors The fundamental building blocks that make up a computer including logic gates adders decoders registers and memory Why designing programs to match computer hardware especially memory improves performance How programs are converted into machine language that computers understand How software building blocks are combined to create programs like web browsers Clever tricks for making programs more efficient like loop invariance strength reduction and recursive subdivision The fundamentals of computer security and machine intelligence Project design documentation scheduling portability maintenance and other practical programming realities Learn what really happens when your code runs on the machine and you'll learn to craft better more efficient code

The Programmer's Craft Richard J. Weiland,1983 In shaping the current version of this book a number of goals were set The first was that the book be independent of any particular computer or programming language but be compatible with them all This book will be useful in any computer environment The second was that it correspond well to a generally agreed on portion of the Computer Science curriculum The book is aimed toward the material recommended by the Association for Computing Machinery for a second course in Computer Science The third and by far the easiest as it turned out was to make the book both substantive and entertaining

The Art and Craft of Computing Stefano Ceri,Dino Mandrioli,Licia Sbattella,1998 Gives students a firm rooting in the fundamental principles of computer science and an appreciation of the correlation between those principles and an introduction to programming Maintains strong coverage of the topics taught in the traditional introductory courses including algorithms and basic elements of programming languages and then goes further to introduce higher level topics such as the structures of operating systems databases and productivity tools

Parallel Computing: Fundamentals, Applications and New Directions E.H. D'Hollander,G.R. Joubert,Frans Peters,Ulrich Trottenberg,1998-07-22 This volume gives an overview of the state of the art with respect to the development of all types of parallel computers and their application to a wide range of problem areas The international conference on parallel computing ParCo97 Parallel Computing 97 was held in Bonn Germany from 19 to 22 September 1997 The first conference in this biannual series was held in 1983 in Berlin Further conferences were held in Leiden The Netherlands London UK Grenoble France and Gent Belgium From the outset the aim with the ParCo Parallel Computing conferences was to promote the application of parallel computers to solve real life problems In the case of ParCo97 a new milestone was reached in that more than half of the papers and

posters presented were concerned with application aspects This fact reflects the coming of age of parallel computing Some 200 papers were submitted to the Program Committee by authors from all over the world The final programme consisted of four invited papers 71 contributed scientific industrial papers and 45 posters In addition a panel discussion on Parallel Computing and the Evolution of Cyberspace was held During and after the conference all final contributions were refereed Only those papers and posters accepted during this final screening process are included in this volume The practical emphasis of the conference was accentuated by an industrial exhibition where companies demonstrated the newest developments in parallel processing equipment and software Speakers from participating companies presented papers in industrial sessions in which new developments in parallel computing were reported
