## **Creating Internet Intelligence:**

*Creating Internet Intelligence* Ben Goertzel, 2012-12-06 *Creating Internet Intelligence* is an interdisciplinary treatise exploring the hypothesis that global computer and communication networks will one day evolve into an autonomous intelligent system and making specific recommendations as to what engineers and scientists can do today to encourage and shape this evolution. A general theory of intelligent systems is described based on the author's previous work and in this context the specific notion of Internet intelligence is fleshed out in its commercial, social, psychological, computer science, philosophical, and theological aspects. Software engineering work carried out by the author and his team over the last few years aimed at seeding the emergence of Internet intelligence is reviewed in some detail, including the Webmind AI Engine, a uniquely powerful Internet-based digital intelligence, and the Webworld platform for peer-to-peer distributed cognition and artificial life. The book should be of interest to computer scientists, philosophers, and social scientists, and more generally to anyone concerned about the nature of the mind or the evolution of computer and Internet technology and its effect on human life.

*Psychology and the Internet* Jayne Gackenbach, 1998 *Psychology and the Internet* provides the first resource for examining how the Internet affects our definition of who we are and our communication and work patterns. It also examines how normal behavior differs from the pathological with respect to Internet use. The book contains three sections: the first section covers the self in relation to the Internet; the second section explores how the Internet is used to meet new friends and love interests, as well as to conduct business; and the final section examines the philosophical ramifications of Internet use and our definitions of reality and consciousness.

**Edge Intelligence in the Making** Sen Lin, Zhi Zhou, Zhaofeng Zhang, Xu Chen, Junshan Zhang, 2020-10-21 With the explosive growth of mobile computing and Internet of Things (IoT) applications, as exemplified by AR, VR, smart city, and video/audio surveillance, billions of mobile and IoT devices are being connected to the Internet, generating zillions of bytes of data at the network edge. Driven by this trend, there is an urgent need to push the frontiers of artificial intelligence (AI) to the network edge to fully unleash the potential of IoT big data. Indeed, the marriage of edge computing and AI has resulted in innovative solutions, namely edge intelligence or edge AI. Nevertheless, research and practice on this emerging interdisciplinary field is still in its infancy stage. To facilitate the dissemination of the recent advances in edge intelligence in both academia and industry, this book conducts a comprehensive and detailed survey of the recent research efforts and also showcases the authors' own research progress on edge intelligence. Specifically, the book first reviews the background and present motivation for AI running at the network edge. Next, it provides an overview of the overarching architectures, frameworks, and emerging key technologies for deep learning models toward training/inference.

at the network edge To illustrate the research problems for edge intelligence the book also showcases four of the authors own research projects on edge intelligence ranging from rigorous theoretical analysis to studies based on realistic implementation Finally it discusses the applications marketplace and future research opportunities of edge intelligence This emerging interdisciplinary field offers many open problems and yet also tremendous opportunities and this book only touches the tip of iceberg Hopefully this book will elicit escalating attention stimulate fruitful discussions and open new directions on edge intelligence
