der Plas, T. Hokken, J. den Biggelaar, 2013-10-22 Computers are more and more becoming creative tools in music as well as in the visual arts and design. In the last few years it has become clear that digital technology provides a platform for multimedia productions as well as a medium for new art forms. Computer Music and Computer Graphics Animation have their own international forums. The need was felt however to bring together the diverse disciplines within art and technology in one international event: the First International Symposium on Electronic Art (FISEA). The Symposium attracted considerable interest and hundreds of papers and proposals were submitted, of which a selection were accepted. This book, also published as a supplement to the journal *Leonardo*, publishes 20 of these selected papers under the editorship of Wim van der Plas, Ton Hokken, and Johan den Biggelaar. This richly illustrated issue on Electronic Art reflects the enormous international interest which FISEA generated and will further stimulate interest in applications of new technology in music, visual arts, and design.

Creative Minds, Charmed Lives Yu Kiang Leong, 2010. This book features interviews of 38 eminent mathematicians and mathematical scientists who were invited to participate in the programs of the Institute for Mathematical Sciences, National University of Singapore. Originally published in its newsletter *Imprints* from 2003 to 2009, these interviews give a fascinating and insightful glimpse into the passion driving some of the most creative minds in modern research in pure mathematics, applied mathematics, statistics, economics, and engineering. The reader is drawn into a panorama of the past and present development of some of the ideas that have revolutionized modern science and mathematics. This book should be relevant to those who are interested in the history and psychology of ideas. It should provide motivation, inspiration, and guidance to students who aspire to do research and to beginning researchers who are looking for career niches. For those who wish to be broadly educated, it is informative without delving into excessive technical details and is at the same time thought-provoking enough to arouse their curiosity to learn more about the world around them. *Creative Computing*, 1985. *PC Graphics & Video*, 1996. *Creative Training Techniques Handbook* Robert W. Visualisation The graphic potential of computers has been recognised almost since computing was first used but it is only comparatively recently that their possibilities as devices for the visualisation of complex and largely abstract phenomena has begun to be more fully appreciated Some workers stress the need to be able to model photographic reality in order to assist in this task They look to better algorithms and more resolution to achieve this end Others Alan Mackay for instance suggest that it is not just a matter of providing more and more pixels It is a matter of providing congenial clues which employ to the greatest extent what we already know
