Decomposition Methods For Complex Factory Scheduling Problems:

Decomposition Methods for Complex Factory Scheduling Problems Irfan M. Ovacik, Reha Uzsoy, 2012-12-06 The factory scheduling problem that of allocating machines to competing jobs in manufacturing facilities to optimize or at least improve system performance is encountered in many different manufacturing environments Given the competitive pressures faced by many companies in today s rapidly changing global markets improved factory scheduling should contribute to a firm s success However even though an extensive body of research on scheduling models has been in existence for at least the last three decades most of the techniques currently in use in industry are relatively simplistic and have not made use of this body of knowledge In this book we describe a systematic long term research effort aimed at developing effective scheduling algorithms for complex manufacturing facilities We focus on a specific industrial context that of semiconductor manufacturing and try to combine knowledge of the physical production system with the methods and results of scheduling research to develop effective approximate solution procedures for these problems The class of methods we suggest decomposition methods constitute a broad family of heuristic approaches to large NP hard scheduling problems which can be applied in other environments in addition to those studied in this book

Handbook of Heuristics Rafael Martí, Panos M. Pardalos, Mauricio G.C. Resende, 2025-11-17 The handbook of heuristics consists of five main parts search strategies local search metaheuristics analysis and implementations and applications They cover from search methods and methodological aspects such as matheuristics the exciting field in which mathematical programming is combined with heuristics to applications that provide the practitioner with a description of some relevant optimization issues in a number of specific application areas such as scheduling vehicle routing or network optimization The first edition of the Handbook of Heuristics was published in 2018 and contained 47 chapters In this second edition the authors revised 30 of them to include new developments in the area that appeared in the last few years In particular the reader may find 14 chapters in search strategies including a new chapter on deep learning 4 in local search 14 in metaheuristics 5 in analysis and implementations and 24 in applications The inclusion of 14 new chapters makes this second edition even more comprehensive totaling 61 chapters

Online Scheduling in Manufacturing Haruhiko Suwa, Hiroaki Sandoh, 2012-10-11 Online scheduling is recognized as the crucial decision making process of production control at a phase of being in production according to the released shop floor schedule Online scheduling can be also considered as one of key enablers to realize prompt capable to promise as well as available to promise to customers along with reducing production lead times under recent globalized competitive markets Online Scheduling in Manufacturing introduces new approaches to online scheduling based on a concept of cumulative delay The cumulative delay is regarded as consolidated information of uncertainties under a dynamic environment in manufacturing and can be collected constantly without much effort at any points in time during a schedule execution In this approach the cumulative delay of the schedule has the important role of a criterion for making a decision whether or not a schedule revision is carried out The cumulative delay approach to trigger schedule revisions has the following capabilities for the practical decision making 1 To

reduce frequent schedule revisions which do not necessarily improve a current situation with much expense for its operation
 2 To avoid overreacting to disturbances dependent on strongly an individual shop floor circumstance and
 3 To simplify the monitoring process of a schedule status Online Scheduling in Manufacturing will be of interest to both practitioners and researchers who work in planning and scheduling in manufacturing Readers will find the importance of when to revise policies during a schedule execution and their influences on scheduling results
