Dimensions And Entropies In Chaotic Systems:

Dimensions and Entropies in Chaotic Systems Gottfried Mayer-Kress, 2012-12-06 These proceedings contain the papers contributed to the International Workshop on Dimensions and Entropies in Chaotic Systems at the Pecos River Conference Center on the Pecos River Ranch in September 1985 The workshop was held by the Center for Nonlinear Studies of the Los Alamos National Laboratory At the Center for Nonlinear Studies the investigation of chaotic dynamics and especially the quantification of complex behavior has a long tradition In spite of some remarkable successes there are fundamental as well as numerical problems involved in the practical realization of these algorithms This has led to a series of publications in which modifications and improvements of the original methods have been proposed At present there exists a growing number of competing dimension algorithms but no comprehensive review explaining how they are related Further in actual experimental applications rather than a precise algorithm one finds frequent use of rules of thumb together with error estimates which in many cases appear to be far too optimistic Also it seems that questions like What is the maximal dimension of an attractor that one can measure with a given number of data points and a given experimental resolution have still not been answered in a satisfactory manner for general cases

Nonlinear Waves Andrei V. Gaponov-Grekhov, Mikhail I. Rabinovich, Jüri Engelbrecht, 2012-12-06 Since 1972 the Schools on Nonlinear Physics in Gorky have been a meeting place for Soviet scientists working in this field Instead of producing for the first time English proceedings it has been decided to present a good cross section of nonlinear physics in the USSR Thus the participants at the last School were invited to provide English reviews and research papers for these two volumes which in the years to come will be followed by the proceedings of forthcoming schools The second volume deals with dynamical chaos in classical and quantum systems with evolution in chemical systems and self organisation in biology and with applications of nonlinear dynamics to condensed matter sea waves and astrophysics
Cycles and Chaos in Economic Equilibrium Jess Benhabib, 1992-03-23 In recent years economists have begun to use the techniques of nonlinear dynamics to show that some apparently erratic and turbulent economic phenomena reflect subtle underlying patterns How do cyclic and chaotic dynamics arise in economic models of equilibrium How can empirical methods be used to detect nonlinearities and cyclic and chaotic structures in economic models In examining these questions this book brings together the most significant work that has been done to date in economics based chaos theory Selected here particularly for the economist who is not a specialist in chaos theory the essays some previously unpublished and others not widely available describe a new tool for understanding business cycles stabilization policy and forecasting The contributors to the volume are William J Baumol Jess Benhabib Michele Boldrin William A Brock Richard H

Afraimovich, 1989 The authors explore the origin of multidimensional strange attractors and their role in describing turbulence It includes an analytical estimation of the deminsions of strange attractors for models described by differential difference equations and discusses the conditions in which space homogeneous chaos is stable with respect to random perturbations in flow systems

Dynamics of Sensory and Cognitive Processing by the Brain Theodore Melnechuk, Erol Başar, 2012-12-06 In neurophysiology the emphasis has been on single unit studies for a quarter century since the sensory work by Lettwin and coworkers and by Hubel and Wiesel the central work by Mountcastle the motor work by the late Evarts and so on In recent years however field potentials and a more global approach generally have been receiving renewed and increasing attention This is a result of new findings made possible by technical and conceptual advances and by the confirmation and augmentation of earlier findings that were widely ignored for being controversial or inexplicable To survey the state of this active field a conference was held in West Berlin in August 1985 that attempted to cover all of the new approaches to the study of brain function The approaches and emphases were very varied basic and applied electric and magnetic EEG and EP ERP connectionistic and field global and local fields surface and multielectrode low frequencies and high frequencies linear and non linear The conference comprised sessions of invited lectures a panel session of seven speakers on How brains may work and a concluding survey of relevant methodologies The conference showed that the combination of concepts methods and results could open up new important vistas in brain research Included here are the proceedings of the conference updated and revised by the authors Several attendees who did not present papers at the conference later accepted my invitation to write chapters for the book **Chaos and Nonlinear Dynamics** Robert C. Hilborn, 2000 This book introduces readers to the full range of current and background activity in the rapidly growing field of nonlinear dynamics It uses a step by step introduction to dynamics and geometry in state space to help in understanding nonlinear dynamics and includes a thorough treatment of both differential equation models and iterated map models as well as a derivation of the famous Feigenbaum numbers It is the only introductory book available that includes the important field of pattern formation and a survey of the controversial questions of quantum chaos This second edition has been restructured for easier use and the extensive annotated references are updated through January 2000 and include many web sites for a number of the major nonlinear dynamics research centers With over 200 figures and diagrams analytic and computer exercises this book is a necessity for both the classroom and the lab [Journal of the Optical Society of America](#) ,1988 **Measures of Complexity and Chaos** Neal B. serves as a general introduction to the state of the art of quantitatively characterizing chaotic and turbulent behavior It is the outgrowth of an international workshop on Quantitative Measures of Dynamical Complexity and Chaos held at Bryn Mawr College June 22-24 1989 The workshop was co sponsored by the Naval Air Development Center in Warminster PA and by the NATO Scientific Affairs Programme through its special program on Chaos and Complexity Meetings on this subject have occurred regularly since the NATO workshop held in June 1983 at Haverford College only two kilometers distant from the site of this latest in the series At that first meeting organized by J Gollub and H Swinney quantitative tests for nonlinear dynamics and chaotic behavior were debated and promoted 1 In the six years since the methods for dimension entropy and Lyapunov exponent calculations have been applied in many disciplines and the procedures have been refined Since then it has been necessary to demonstrate quantitatively that a signal is chaotic rather than it being acceptable to observe that it looks chaotic Other related meetings have included the Pecos River Ranch meeting in September 1985 of G Mayer Kress 2 and the reflective and forward looking gathering near Jerusalem organized by M Shapiro and I Procaccia in December 1986 3 This meeting was proof that interest in measuring chaotic and turbulent signals is widespread Perspectives in Biological Dynamics and Theoretical Medicine Stephen H.
