Casey O'Donnell examines the creative collaborative practice of typical game developers. His investigation of why game developers work the way they do sheds light on our understanding of work, the organization of work, and the market forces that shape and are shaped by media industries. O'Donnell shows that the ability to play with the underlying systems, technical, conceptual, and social, is at the core of creative and collaborative practice, which is central to the New Economy. When access to underlying systems is undermined, so too is the creative collaborative process. Drawing on extensive fieldwork in game studios in the United States and India, O'Donnell stakes out new territory empirically, conceptually, and methodologically. Mimicking the structure of videogames, the book is divided into worlds, within which are levels, and each world ends with a boss fight, a rant about lessons learned and tools mastered. O'Donnell describes the process of videogame development from pre-production through production, considering such aspects as experimental systems, socially mandatory overtime, and the perpetual startup machine that exhausts young, initially enthusiastic workers. He links work practice to broader systems of publishing, manufacturing, and distribution, introduces the concept of a privileged actor in the network, and describes patent and copyright enforcement by industry and the state.

Leadership in Science and Technology: A Reference Handbook William Sims Bainbridge, 2011-10-20. This 2-volume set within the SAGE Reference Series on Leadership tackles issues relevant to leadership in the realm of science and technology. To encompass the key topics in this arena, this handbook features 100 topics arranged under eight headings. Volume 1 concentrates on general principles of science and technology leadership and includes sections on social scientific perspectives on 5 key scientific concepts about leading and innovating in 5 characteristics of 5 and strategies, tactics, and tools of 5 leadership in government projects and research initiatives, leadership in industry, research, development, and innovation, and finally, leadership in education and university-based research. By focusing on key topics within 100 brief chapters, this unprecedented reference resource offers students more detailed information and depth of discussion than typically found in an encyclopedia entry, but not as much jargon, detail, or density as in a journal article or a research handbook chapter. Entries are written in language and style that is broadly accessible, and each is followed by cross-references and a brief bibliography and further readings. A detailed index and an online version of the work enhance accessibility for today's student audience.

Invisible Labour in Modern Science Jenny Bangham, Xan Chacko, Judith Kaplan, 2022-09-01. *Invisible Labour in Modern Science* is about the people who are concealed, eclipsed, or anonymised in accounts of scientific research. Many scientific workers, including translators, activists, archivists, technicians, curators, and ethics review boards, are absent in publications and omitted from stories of discovery. Scientific reports are often held to ideals of transparency, yet they are the result of careful judgments about what and what not to reveal. Professional scientists are often celebrated, yet they are expected to uphold principles of objective self-denial. The emerging and leading scholars writing in this book negotiate such silences and omissions to reveal how invisibilities have shaped twentieth and twenty-first century science. Invisibility can be unjust; it can also be powerful. What is invisible to whom, and when, does this

matter How do power structures built on hierarchies of race gender class and nation frame what can be seen And for those observing science When does the recovery of the invisible serve social justice and when does it invade privacy Tackling head on the silences and dilemmas that can haunt historians this book transforms invisibility into a guide for exploring the moral sensibilities and politics of science and its history *The Engineering-Business Nexus* Steen Hyldgaard Christensen, Bernard Delahousse, Christelle Didier, Martin Meganck, Mike Murphy, 2018-11-14 Fascinating and compelling in equal measure this volume presents a critical examination of the multilayered relationships between engineering and business In so doing the study also stimulates ethical reflection on how these relationships either enhance or inhibit strategies to address vital issues of our time In the context of geopolitical economic and environmental tendencies the authors explore the world that we should want to create and the role of the engineer and the business manager in this endeavor Throughout this volume the authors identify periods of alignment and periods of tension between engineering and business They look at focal points of the engineering business nexus related to the development of capitalism The book explores past and present movements to reshape reform or reject this nexus The volume is informed by questions of importance for industry as well as for higher education These are What kinds of conflict arise for engineers in their attempts to straddle both professional and organizational commitments How should professionals be managed to avoid a clash of managerial and professional cultures How do engineers create value in firms and corporations What kinds of tension exist between higher education and industry What challenges does the neoliberal entrepreneurial university pose for management faculty students society and industry Should engineering graduates be ready for work and can they possibly be What kinds of business issues are reflected in engineering education curricula and for what purpose Is there a limit to the degree of business hybridization in engineering degree programs and if so what would be the criterion for its definition Is there a place in engineering education curricula for reflective critique of assumptions related to business and economic thinking One ideal of management and control comes to the fore as the Anthropocene the world transformed into an engineered artefact which includes human existence The volume raises the question as to how engineering and business together should be considered given the fact that the current engineering business nexus remains embedded within an economic model of continual growth By addressing macro level issues such as energy policy sustainable development globalization and social justice this study will both help create awareness and stimulate development of self knowledge among practitioners educators and students thereby ultimately addressing the need for better informed citizens to safeguard planet Earth as a human life supporting system *Work in America* Carl E. Van Horn, Herbert A. Schaffner, 2003-12-15 The first comprehensive analysis of work and the workforce in the United States from the Industrial Revolution to the era of globalization This comprehensive two volume reference book is the first to analyze the central role of work and the workforce in U S life from the Industrial Revolution through today s information economy Drawing on a variety of disciplines economics public policy law human and civil rights cultural studies

Professionalism, the Third Logic Eliot Freidson,2001-06 This new work explores the meaning and implications of professionalism as a form of social organization Eliot Freidson formalizes professionalism by treating it as an ideal type grounded in the political economy he presents the concept as a third logic or a more viable alternative to consumerism and bureaucracy He asks us to imagine a world where workers with specialized knowledge and the ability to provide society with especially important services can organize and control their own work without directives from management or the influence of free markets Freidson then appraises the present status of professionalism exploring how traditional and national variations in state policy and organization are influencing the power and practice of such professions as medicine and law Widespread attacks by neoclassical economists and populists he contends are obscuring the social value of credentialism and monopolies The institutions that sustain professionalism in our world are simply too useful to both capital and state to dismiss
