Social/Emotional

at birth, the brain has 200 billion brain cells called neurons

the brain grows 1.7 grams a day during baby's first year

60% of an infant's energy intake from food is used for brain growth

babies need loving interaction, touch, and parents that are tuned into their needs, as much as they need nutrition

0-1 years

communication across different regions of the developing brain occurs most rapidly during the first two years of life

by age two, the brain reaches about 75% of adult weight

DHA, an omega-3 fatty acid, and choline, an essential nutrient, are critical building blocks for the developing brain

by age one, infants typically understand about 70 words, but speak only a handful of them

at this age, toddlers become increasingly independent and interested in new things

1-2 years

toddlers have more than 100 trillion cell connections called synapses. At age two, the most they'll ever have in their life

by age two, the brain structure has the overall appearance of an adult brain

Calcium and vitamin D, which promote calcium absorption, help strengthen bones and teeth

at 18 months, a toddler's spoken vocabulary starts to expand. They add one new word every two waking hours

toddlers imitate behavior of others, especially adults and older children

by two years most toddlers have a 300-word vocabulary and are putting together simple two word sentences

2+ years
