Desert Planning International Lessons:

Desert Planning Gideon Golany, 1982 This book provides technical guidance for the whole range of professionals involved in arid zone development planners community builders architects policy makers and economists it covers such varied fields as urban planning and architectural form groundwater supply an desalination environmental control migration and social development Dust jacket

Desert Planning Gideon S. Golany, 1982 **Urban Development in the Muslim World** Hooshang Amirahmadi, 2017-09-08 First Published in 2017 Routledge is an imprint of Taylor Francis an Informa company

Leadership in Architectural Research Hazem Rashed-Ali, Shelley Roff, 2009 Ethics and Urban Design Gideon S. Golany, 1995-08-01 The city according to urban design scholar Gideon Golany is the largest and most complicated project ever produced by humankind In Ethics and Urban Design he challenges design professionals to reexamine their basic assumptions about the urban environment and offers design strategies based on enduring human values In search of answers to the paradoxical problems of the modern city Golany takes the reader through the sweep of human settlements from the dawn of civilization to the present His authoritative examination of the genesis of the city is illuminated by instructive examples of early urban centers Mesopotamia the Indus River Valley the Egyptian cities of the Nile and the capital cities of ancient China all are examined in the light of what made them work as major centers of human activity What Golany finds in the success stories of the past are cohesive sociocultural values that shaped the design of homes neighborhoods and cities These ethical values helped to maintain an equilibrium within the society that permeated its natural social and human made environments In the present era conversely he finds a major disconnection between human values and the ethics of technology which has resulted in confusion imbalance and dehumanization To help designers gain a perspective on possible solutions Golany explains leading comprehensive design strategies including the valley theory the urban border zone concept and the regional concept of Patrick Geddes In the case study of contemporary Holland he details what a small densely populated country has been able to achieve through design planning rooted in environmental ethics

Future Frontiers for Urban Design the culminating section of this groundbreaking book opens with Golany's vision of the future city He examines the issues of thermal performance and climate as they relate to urban design and offers the concept of geospace the earth enveloped habitat

Buttressing his presentation with detailed information on the mechanics of geospace Golany describes case studies of the successful use of earth enveloped habitats in China and Tunisia He makes a powerful argument for the geospace city as a renewal of ancient traditions that can restore the vital equilibrium between nature and human settlements that we seem to have lost

Ethics and Urban Design is a distinguished scholar's analysis and prescription for the city it offers an abundance of stimulating ideas for the architects designers and planners who have assumed responsibility for its future

Ethics and Urban Design draws on historical examples and contemporary case studies from around the world to illustrate urban design strategies that can help restore equilibrium to the natural social and built environments of the city In this stimulating book

urban design scholar Gideon Golany offers architects designers and planners both an in depth analysis of the fundamental issues of urban design and practical options for the design of the future city Examines the genesis and development of the city from the earliest settlements to the rise of urban society Presents urban design strategies based on historical examples of early urban centers including Mesopotamia the Indus River Valley Egypt and China Offers case studies of environmental success stories from Europe Asia and Africa Details geospace design options the use of underground space for diversified land use housing and transportation Fully illustrated with over 80 photographs drawings and diagrams

Sunlight and Shade in the First Cities Mary Shepperson, 2017-01-16 The emergence of urbanism in Iraq occurred under the distinctive climatic conditions of the Mesopotamian plain rainy winters and extremely hot summers profoundly affected the formation and development of these early cities Sunlight and Shade in the First Cities explores the relationship between society culture and lived experience through the way in which sunlight was manipulated in the urban built environment Light is approached as both a physical phenomenon which affects comfort and the practical usability of space and as a symbolic phenomenon rich in social and religious meaning Through the reconstruction of ancient urban light environments to the extent possible from the archaeological remains the location timing and meaning of activities within early Mesopotamian cities become accessible Sunlight is shown to have influenced the formation and symbolism of urban architecture and shaped the sensory experience of urban life From cities as part of the sunlit landscape this work progresses to consider city forms as a whole and then to the examination of architectural types residential sacred and palatial Architectural analysis is complemented by analysis of contemporary textual sources along with iconographic and artefactual evidence The cities under detailed examination are limited to those on the Mesopotamian plain focusing on the Early Dynastic periods up to the end of the second millennium BC This volume demonstrates the utility of light as a tool with which to analyse not just ancient Mesopotamian settlements but the built environment of any past society especially where provision of or protection from sunlight critically affects life The active influence of sunlight is demonstrated within Mesopotamian cities at every scale of analysis

A Rediscovered Frontier Philip L. Jackson, Robert Kuhlken, 2006 A Rediscovered Frontier describes the changing land use issues taking place in the rapidly growing western United States paying special attention to the previously unexplored area of private lands planning and local growth management The book begins by exploring the term New West and then describes prototypical land use patterns found throughout the West It examines the spatial circumstances of rural and small town growth patterns and provides examples of the kinds of development that could occur elsewhere in areas having similar geographic situations The book takes a close look at Oregon's statewide planning approach to managing growth and concludes with a forward looking cooperative approach to comprehensive planning Intended as a text for college students taking courses in land use planning a sourcebook for land use planning and environmental management professionals as well as anyone who cares about western environments A Rediscovered Frontier addresses the social economic political and above all geographical
