Design Of Animal Communication

Design Of Animal Communication:

Design of animal communication Marc D. Hauser, Animal Signals Yngve Espmark, Trond Amundsen, Gunilla Rosenqvist, 2000 How can we explain the peacock's beautiful tail decorations or the wonderful song of the nightingale Why are some smells nice and others nasty How do animals signal their intentions and qualities to potential partners How do offspring tell parents about their needs Are signals tuned to the environment and to the mental abilities of receivers Essential for understanding how animals cope with their ecological and social environment the study of animal signals is one of the most active research areas in evolutionary biology Understanding the signalling systems of nature has wide ranging relevance including biological conservation and human communication Written by international scientists this is a comprehensive overview of the fascinating diversity of animal signals and signalling functions Combining reviews and research the book is aimed at both students and professional scientists

The Design of Animal Communication Marc D. Hauser, Mark Konishi, Masakazu Konishi, 1999 Based on the approach laid out in the 1950s by Nobel laureate Nikolaas Tinbergen this book looks at animal communication from the four perspectives of mechanisms ontogeny function and phylogeny

Psychological Mechanisms in Animal Communication Mark A. Bee, Cory T. Miller, 2017-01-26 This book analyzes the psychological mechanisms critical to animal communication The topics covered range from single neurons to broad scale phylogenetic patterns shedding new light on the sensory perceptual and cognitive processes that underlie the communicative behaviors of signalers and receivers alike In so doing the contributing authors collectively integrate research questions and methods from behavioral ecology cognitive ethology comparative psychology evolutionary biology sensory ecology and neuroscience No less broad is the volume's taxonomic coverage which spans bees to blackbirds to baboons The ultimate goal of the book is to stimulate additional research into the diversity and evolution of the psychological mechanisms that make animal communication possible

The Quest for Symbolic Communication in Non-Human Animals Ulrike Griebel, D. Kimbrough Oller, Irene M. Pepperberg, 2024-06-13 Human language is unique among animals We assume that complex cognitive capacities in general and language in particular evolved gradually and thus are manifest in different kinds and or degrees in other animals demonstrating social communication This assumption is supported by the fact that we can train social species from very different groups of animals e.g. great apes dolphins dogs parrots to understand and in several cases even use abstract symbols for communication with humans and conspecifics Even simple grammatical rules for sequences of 2-3 symbols can be trained to be understood by several species e.g. great apes dogs dolphins Even though human language training in these species takes considerable time and effort it convinces us that cognitive foundations for language are present in other species and given the relevant selection pressures symbolic communication could evolve in other species

Playback and Studies of Animal Communication Peter K. McGregor, 2013-11-11 Playback is the technique of rebroadcasting natural or synthetic signals to animals and observing their response The ability to present a

putative signal in isolation without the potential confounding effects of other activities of the signaller is the main reason for the depth and range of our knowledge of communication systems To date playback of sound signals has predominated but playback of electric signals and even video playback of visual signals suggests that playback will become just as prevalent in studies of communication in other sensory modalities This book is one of the outcomes of a workshop on playback held at Thombridge Hall in the Peak District National Park England during August 1991 There were two reasons for organising the workshop First the considerable and lively debate in the literature about the design and analysis of playback experiments the pseudoreplication debate was in danger of generating more heat than light A workshop forum seemed the obvious place to clarify and if possible resolve the debate Second with the number of new playback and analysis techniques increasing rapidly it seemed an opportune moment to discuss these techniques and to review some rapidly developing areas of interest in sound communication
