underpinnings of design and analysis by selecting and discussing only those carefully chosen designs that offer the greatest utility. Real problems from different areas of agriculture and science are presented throughout to show how practical issues of design and analysis are best handled. Completely revised to greatly enhance readability, this new edition includes a new chapter on covariance analysis to help readers reduce errors while enhancing their ability to examine covariances among selected variables. Expanded material on multiple regression and variance analysis. Additional examples, problems, and case studies. A step-by-step Minitab guide to help with data analysis. Intended for those in the agriculture, environmental, and natural science fields as well as statisticians, this text requires no previous exposure to analysis of variance, although some familiarity with basic statistical fundamentals is assumed. In keeping with the book's practical orientation, numerous workable problems are presented throughout to reinforce the reader's ability to creatively apply the principles and concepts in any given situation.

The authoritative evidence-based coverage you need to safely and competently care for adult critically ill patients and their families or prepare for the critical care nursing certification exam. Endorsed by the American Association of Critical Care Nurses and written by top clinical experts in acute care nursing, this textbook thoroughly covers all the need-to-know details on the care of adult critically ill patients and their families. Supported by helpful tables and algorithms, the book's practical building-block organization starts with the basics before proceeding to more complex concepts, paralleling the blueprint for the critical care nursing CCRN certification examination. AACN Essentials of Critical Care Nursing is divided into four logical sections which, taken as a whole, will give you complete understanding of this challenging area of nursing practice. The Essentials provides fundamental information that new clinicians must understand to provide safe, competent nursing care to all critically ill patients, regardless of their underlying medical diagnosis. Pathological Conditions covers pathologic conditions and management strategies commonly encountered in all adult critical care units. Advanced Concepts in Caring for the Critically Ill Patient presents advanced critical care concepts or pathologic conditions that are less common or more specialized than those generally found in adult critical care units. Key Reference Information includes reference information that you will find helpful in a clinical environment, such as normal laboratory and diagnostic values, algorithms for advanced cardiac life support, and summary tables of critical care drugs and cardiac rhythms. Each chapter begins with Knowledge Competencies that can be used to gauge your progress. This edition is compatible with ECCO Essentials of Critical Care Orientation, the online program offered
