Introduction

- Linear discriminant analysis (LDA), normal discriminant analysis (NDA), or discriminant function analysis is a generalization of Fisher's linear discriminant analysis.
- First, in 1936 Fisher formulated linear discriminant for two classes, and later on, in 1948 C.R Rao generalized it for multiple classes.
- It is a method used to find a linear combination of features that separates two or more classes of objects or events.
- LDA is a supervised learning technique.
- LDA is closely related to analysis of variance (ANOVA) and regression analysis.
- LDA is also closely related to principal component analysis (PCA) and factor analysis.
