ACLS Mega-Code Review Study Cards

Grasser K, Cavallaro D. *ACLS Mega-Code Review Study Cards*, 2nd Edition. (St. Louis, Mo.: The CV Mosby Company, 1993)

Reviewed by Barbara M. Kuska, RN, BSN, ACLS Affiliate
Faculty, Madison, Wisconsin

Just the words "mega code" seem to produce anxiety in many persons anticipating their next advanced cardiac life support (ACLS) class. Both first-time students and those renewing their knowledge are not immune to the anxiety that the thought of mega code provokes. This set of flashcards, now in its second edition, was created to help students study for their next mega-code experience. But the cards comprising this new set go much further than just mega code. The set consists of nine sections that cover a large portion of the content required to pass an ACLS course, but also includes much that isn't necessary for the course.

The major content areas are divided into two parts. Part I includes: The Essentials of Running a Code; Division 1—Overall Approach to Management of Cardiopulmonary Arrest, Algorithms for Treatment; Division 2—Essential Drugs and Treatment Modalities; Division 3—Basic Arrhythmia Interpretation; Division 4—Putting It All Together, Practice for Mega Code; and Division 5—Questions to Further Understanding, More Practice for Mega Code. Part II, called Additional Topics, includes sections titled Beyond the Core, Airway/Ventilation, Basic Life Support, and Pediatrics.

The cards are well-indexed, and the accompanying study guide tells you how to use them. For instance, the authors suggest which cards to concentrate on to prepare for mega code only. The students can work through the scenarios described in the cards to get a good feel for what they need to do in the classroom. Lamentably, these cards also may be one of the greatest weaknesses of the set. The authors acknowledge that they stray from American Heart Association (AHA) guidelines,¹ and provide some of the reasons in the study guide. Unfortunately, there are many other scenarios pertaining to drug doses, recommended drugs, and other information that stray from AHA guidelines without an explanation.¹ This could be misleading or confusing, and could cause students to have problems during their mega-code scenario. Examples of areas I found problematic were suggested uses of lidocaine in doses that are inconsistent with AHA recommendations, including a recommendation that prophylaxis be used before thrombolytic therapy, which contradicts AHA guidelines. All the scenarios that suggest dosing lidocaine in ventricular fibrillation do not mention the current recommendation of 1.0–1.5 mg/kg, or

explain the rationale for using higher doses in patients with ventricular fibrillation. I also was concerned that the authors emphasize starting lidocaine drips "immediately" for fear the team will "forget" to do so at the end of the code. Yet, they never mention the possibility of forgetting to stop lidocaine infusions should a rhythm develop, in which case continuing the drip could be a problem. Such is the case in scenario 4A on cards 4A-13 and 4A-14, in which the patient converts from ventricular fibrillation to a third-degree atrioventricular block; the lidocaine infusion never is discontinued. At my mega-code testing station, this student would "need remediation."

In the several situations where endotracheal doses of drugs are given, the doses of atropine and epinephrine do not follow the AHA recommendation that the drug dose be increased 2.0–2.5 times the intravenous dose.

In several areas that include a scenario (4D-6), and on a card (5A-13) dealing with cardioversion, the recommendations for electrical therapy are confusing and inconsistent with the AHA guidelines. Rather than give five separate recommendations, keeping things as simple as possible would be helpful.

The approach to a stable patient with a wide complex tachycardia of uncertain type varied greatly from that recommended by the AHA.¹ This would confuse the student because vagal maneuvers and the administration of procainamide rather than lidocaine and adenosine are recommended. If the goal of these cards is to encourage innovative approaches to treatment, then why is the set of review cards called a "Mega-Code Review"?

I found the arrhythmia sections to be well-done and helpful, especially for a student wanting more information than is offered in the standard ACLS test. Any student needing help with ECG interpretation should find this section useful. Again, the cards provide more depth than is necessary, but this makes the set useful to more than the beginner.

Although the card set is advertised as a review for mega code, it probably is more suited for use by advanced-level students or instructors who could benefit from some of the "pearls." The beginner is likely to be thrown off by some of the nonstandard recommendations. The authors have produced a comprehensive set of materials, but, at times, I found myself wishing that their treatment biases hadn't entered into the scenarios. The set, even with its flaws, is a useful learning tool as long as the student understands that, although there are many ways to treat real patients, the ACLS mega-code testing most likely will follow the AHA algorithms and not those codified by these authors.
