Ada® in Practice Christine Ausnit, Norman H. Cohen, John B. Goodenough, R.S. Eanes, 2013-03-19 Ada in Practice started life as a case studies report the result of work performed under government contract at SofTech Inc as part of an effort to identify and resolve issues related to Ada usage Although that report has now evolved into a book intended for a more general audience its objectives are largely unchanged As before the primary goal is to promote effective use of Ada both in general programming and design practice and in embedded computer systems specifically Many features of Ada will be new to programmers and designers familiar with other languages the program examples presented in the case studies are intended to serve as guidelines for proper usage of such features while pointing out common misconceptions and programming errors In addition we hope that this book as a whole will highlight the advantages of using Ada at all stages of a program's life cycle from problem analysis through testing and maintenance However it does not purport to hold all the answers to questions of Ada application areas that would benefit from further investigation or more definitive guidelines are also suggested

Writings on health and health management have long been concerned with the great figures that have preserved protected or extended life From Hippocrates and Galen to Vesalius Lister Mengele Pasteur Jenner and Fleming these writings have celebrated individuals whose knowledge and practice has treated our ills and sought to better manage our care For the most part this has been a history of great men sic There are honourable mentions for a small number of women such as Elizabeth Blackwell or Florence Nightingale but by and large one would be forgiven for assuming that the management of health has nearly always been the preserve of men The contribution of women is largely absent written out This book contributes to the process of writing women back into our shared history and understanding of health and its management Its chapters detail how women have been the main healers for communities across the globe for over four millennia It considers the manner in which wise women who used their knowledge of herbs ritual and healing were excluded from emerging medical professions while their good works were written over and written out of local histories through their marginalisation and repositioning More positively it brings to our attention inspiring women who have shaped the ways in which we develop and deliver health in its broadest sense Drawing on the work of women from Kenya Nigeria Hawaii T rkiye USA Ireland and the UK and from disciplines that span medicine social work mental health health promotion occupational therapy midwifery pharmacology and traditional healing the women considered in this volume advance our understanding of alternative ways of developing delivering and managing health This includes organising services for areas of neglected health e g women s health health prevention rural populations tackling contentious health issues e g female genital mutilation management of mental disorders and the care of health providers themselves e g providing space for women to practice managing the mental well being of healthcare workers This book also shows how the work of these women went beyond health management to influence political and societal change
