Active Perception:

Active Perception Yiannis Aloimonos, 2013-05-13 This book defines the emerging field of Active Perception which calls for studying perception coupled with action. It is devoted to technical problems related to the design and analysis of intelligent systems possessing perception such as the existing biological organisms and the seeing machines of the future. Since the appearance of the first technical results on active vision, researchers began to realize that perception and intelligence in general is not transcendental and disembodied. It is becoming clear that in the effort to build intelligent visual systems, consideration must be given to the fact that perception is intimately related to the physiology of the perceiver and the tasks that it performs. This viewpoint, known as Purposive Qualitative or Animate Vision, is the natural evolution of the principles of Active Vision. The seven chapters in this volume present various aspects of active perception, ranging from general principles and methodological matters to technical issues related to navigation, manipulation, recognition, learning, planning, reasoning, and topics related to the neurophysiology of intelligent systems. Arun K. Sood, Harry Wechsler, 2012-12-06 Intelligent robotics has become the focus of extensive research activity. This effort has been motivated by the wide variety of applications that can benefit from the developments. These applications often involve mobile robots, multiple robots working and interacting in the same work area, and operations in hazardous environments like nuclear power plants. Applications in the consumer and service sectors are also attracting interest. These applications have highlighted the importance of performance, safety, reliability, and fault tolerance. This volume is a selection of papers from a NATO Advanced Study Institute held in July 1989 with a focus on active perception and robot vision. The papers deal with such issues as motion understanding, 3-D data analysis, error minimization, object and environment modeling, object detection and recognition, parallel and real-time vision, and data fusion. The paradigm underlying the papers is that robotic systems require repeated and hierarchical application of the perception-planning-action cycle. The primary focus of the papers is the perception part of the cycle. Issues related to complete implementations are also discussed. **Active Perception Vs. Passive Perception**

Moore School of Electrical Engineering, Dept. of Computer and Information Science, Ruzena Bajcsy, 1985 **Handbook of Artificial Intelligence in Psychology** Farzin Forouzani Fard, 2024-01-14 In the vast expanse of human understanding, few domains captivate and baffle as much as the interplay between artificial intelligence (AI) and the intricacies of human psychology. It signifies the merging of two separate realms, each teeming with its unique complexities, mysterious enigmas, and profound implications. Our journey through this book manifests as an exploration, a quest to reveal the intricate dimensions of intellect, language, emotions, cognition, character, and neuropsychology in this AI-defined era. Nicholas J. Butko, 2010 Action is indelibly tied to perception, and good perception is vital to our survival. Action helps to inform organisms about the world they inhabit and to accrue information that aids in achieving their goals in a timely manner. In many computer vision applications, action plays no role in

understanding an image yet in natural situations action and perception are inextricably linked across all levels This thesis is about building machines that operate in real time in the real world using actions to aid perception In the chapters of this thesis there are many examples of active perception domains each with challenging problems We analyze these problems mathematically propose solutions and evaluate their performance in real world conditions In the process we explore a robust mathematical foundation for understanding active perception and develop many techniques for practical analysis

Scholarpedia of Touch Tony Prescott,Ehud Ahissar,Eugene Izhikevich,2015-11-21 Scholarpedia s Encyclopedia of Touch provides a comprehensive collection of peer reviewed articles written by leading researchers detailing our current scientific understanding of tactile sensing and its neural substrates in animals including humans The encyclopedia allows ideas and insights to be shared between researchers working on different aspects of touch and in different species including research in synthetic touch systems In addition this encyclopedia raises awareness of research in tactile sensing and increases scientific and public interest in the field The articles address subjects including tactile control whiskered robots vibrissal coding the molecular basis of touch invertebrate mechanoreception fingertip transducers and tactile sensing All the articles in this encyclopedia provide in depth and state of the art scholarly treatment of the academic topics concerned making it an excellent reference work for academics professionals and students

Machine Learning Methods for High-Level Cognitive Capabilities in Robotics Emre Ugur,Tetsuya Ogata,Yiannis Demiris,Tadahiro Taniguchi,Takayuki Nagai,2019-12-24 **Cognition and the Brain** Andrew Brook,Kathleen Akins,2005-09-12 This volume provides an up to date and comprehensive overview of the philosophy and neuroscience movement which applies the methods of neuroscience to traditional philosophical problems and uses philosophical methods to illuminate issues in neuroscience At the heart of the movement is the conviction that basic questions about human cognition many of which have been studied for millennia can be answered only by a philosophically sophisticated grasp of neuroscience s insights into the processing of information by the human brain Essays in this volume are clustered around five major themes data and theory in neuroscience neural representation and computation visuomotor transformations color vision and consciousness

Biomimetic and Biohybrid Systems Nathan F. Lepora,Anna Mura,Holger G. Krapp,Paul F.M.J. Verschure,Tony J. Prescott,2013-07-01 This book constitutes the refereed proceedings of the second International Conference on Biomimetic and Biohybrid Systems Living Machines 2013 held in London UK in July August 2013 The 65 revised full papers presented were carefully reviewed and selected from various submissions The papers are targeted at the intersection of research on novel live like technologies inspired by scientific investigation of biological systems biomimetics and research that seeks to interface biological and artificial systems to create biohybrid systems

Knowledge-Based Vision-Guided Robots Nick Barnes,Zhi-Quiang Liu,2002-08-06 Many robotics researchers consider high level vision algorithms computational too expensive for use in robot guidance This book introduces the reader to an alternative approach to perception for autonomous mobile robots It explores

how to apply methods of high level computer vision and fuzzy logic to the guidance and control of the mobile robot The book introduces a knowledge based approach to vision modeling for robot guidance where advantage is taken of constraints of the robot's physical structure the tasks it performs and the environments it works in This facilitates high level computer vision algorithms such as object recognition at a speed that is sufficient for real time navigation The text presents algorithms that exploit these constraints at all levels of vision from image processing to model construction and matching as well as shape recovery These algorithms are demonstrated in the navigation of a wheeled mobile robot

Active Perception in the History of Philosophy José Filipe Silva, Mikko Yrjönsuuri, 2014-03-18 The aim of the present work is to show the roots of the conception of perception as an active process tracing the history of its development from Plato to modern philosophy The contributors inquire into what activity is taken to mean in different theories challenging traditional historical accounts of perception that stress the passivity of percipients in coming to know the external world Special attention is paid to the psychological and physiological mechanisms of perception rational and non rational perception and the role of awareness in the perceptual process Perception has often been conceived as a process in which the passive aspects such as the reception of sensory stimuli were stressed and the active ones overlooked However during recent decades research in cognitive science and philosophy of mind has emphasized the activity of the subject in the process of sense perception often associating this activity to the notions of attention and intentionality Although it is recognized that there are ancient roots to the view that perception is fundamentally active the history remains largely unexplored The book is directed to all those interested in contemporary debates in the fields of philosophy of mind and cognitive psychology who would like to become acquainted with the historical background of active perception but for historical reliability the aim is to make no compromises

[An Overview of the Active Perception Theory](#) Damir Ibrisimovic, 2012-03-07 Research Paper undergraduate from the year 2010 in the subject Psychology Cognition language English abstract The article offers a comprehensive overview of the Active Perception theory PA with the Complex Adaptive Systems theory in the background It proposes that perceptual and motoric actions are essentially the same with the similar requirement for 8 seconds of neural activity until the perceptual or motoric act is carried out In addition the article identifies intent as a precursor to all perceptual or motoric actions The article relies on the latest evidence in neurology neuroscience cognitive psychology genomics and anthropology It also relates these finds to finds in Artificial Intelligence especially neural networks
