# Bulletproofing Web Applications

**Dan Cederholm**

## **Bulletproofing Web Applications:**

*Bulletproofing Web Applications* Adam Kolawa, Wendell Hicken, Cynthia Dunlop, 2001-12-29 Bulletproofing is a road map for how to integrate error prevention and detection into the development process to ensure that Web applications are robust, scalable, efficient, and reliable. It explores defensive programming techniques and explains the benefits of and how to implement coding standards for various programming languages including HTML, CSS, Java, and JavaScript. The authors also show how to perform unit testing on each component as they are developed, along with ways to set up a staging area for deployment and a deployment infrastructure. Bulletproofing details ways to avoid errors as databases, SQL, XML, Web services, SOAP, EJB components, JSP, and other technologies are implemented into Web applications.

**Bulletproof Web Design** Dan Cederholm, 2011-12-14 No matter how visually appealing or content-packed a web site may be, if it doesn't reach the widest possible audience, it isn't truly successful. In *Bulletproof Web Design*, Third Edition, bestselling author and web designer Dan Cederholm outlines standards-based strategies for building designs that can accommodate the myriad ways users choose to view the content. Each chapter starts out with an example of an unbulletproof approach, one that employs traditional HTML-based techniques, which Dan deconstructs, pointing out its limitations. He then gives the example a makeover using HTML and CSS so you can learn to replace bloated code with lean markup and CSS for fast-loading sites that are accessible to all users. Finally, he assembles all of the page components discussed in prior chapters into a single page template. This fully revised and updated third edition introduces CSS3 and HTML5 methods and features, redesigned case studies, including new responsive design examples: size text using keywords, percentages, and ems to allow more user control; plan for vertical expansion of horizontal page components; use floats to achieve grid-like results; ensure that content is still readable in the absence of images or CSS; strip the presentation from data tables and rebuild with CSS; progressively enhance your designs using HTML5 and CSS3.
