A Collection of Programming Problems and Techniques Hermann A. Maurer, Michael Roy Williams, 1972 A comprehensive collection of programming problems to teach the reader computer programming [A Collection of Programming Problems and Techniques](#) Hermann A. Maurer, 1972 *Journal of Research of the National Bureau of Standards* United States. National Bureau of Standards, 1965 [A Reformulation-Linearization Technique for Solving Discrete and Continuous Nonconvex Problems](#) Hanif D. Sherali, W. P. Adams, 2013-04-17 This book deals with the theory and applications of the Reformulation Linearization Convexification Technique RL T for solving nonconvex optimization problems A unified treatment of discrete and continuous nonconvex programming problems is presented using this approach In essence the bridge between these two types of nonconvexities is made via a polynomial representation of discrete constraints For example the binariness on a 0 1 variable x can be equivalently expressed as the polynomial constraint $x^2 - x = 0$ The motivation for this book is the role of tight linear convex programming representations or relaxations in solving such discrete and continuous nonconvex programming problems The principal thrust is to commence with a model that affords a useful representation and structure and then to further strengthen this representation through automatic reformulation and constraint generation techniques As mentioned above the focal point of this book is the development and application of RL T for use as an automatic reformulation procedure and also to generate strong valid inequalities The RLT operates in two phases In the Reformulation Phase certain types of additional implied polynomial constraints that include the aforementioned constraints in the case of binary variables are appended to the problem The resulting problem is subsequently linearized except that certain convex constraints are sometimes retained in particular special cases in the Linearization Convexification Phase This is done via the definition of suitable new variables to replace each distinct variable product term The higher dimensional representation yields a linear or convex programming relaxation *Optimization* H. Ronald Miller, 1999-11-23 A thorough and highly accessible resource for analysts in a broad range of social sciences *Optimization Foundations and Applications* presents a series of approaches to the challenges faced by analysts who must find the best way to accomplish particular objectives usually with the added complication of constraints on the available choices Award winning educator Ronald E Miller provides detailed coverage of both classical calculus based approaches and newer computer based iterative methods Dr Miller lays a solid foundation for both linear and nonlinear models and quickly moves on to discuss applications including iterative methods for root finding and for unconstrained maximization approaches to the inequality constrained linear programming problem and the complexities of inequality constrained maximization and minimization in nonlinear problems Other important features include More than 200 geometric interpretations of algebraic results emphasizing the intuitive appeal of mathematics Classic results mixed with modern numerical methods to aid users of computer programs Extensive appendices containing mathematical details important for a thorough understanding of the
