papers presented were carefully selected and reviewed from 122 submissions. The papers cover a wide spectrum of issues concerning the area of database and information systems including database theory, database architectures, query languages, query processing and optimization, design methods, data integration, view selection, nearest neighbor searching, analytical query processing, indexing and caching, concurrency control, distributed systems, data mining, data streams, ontology engineering, social networks, multi-agent systems, business process modeling, knowledge management and application-oriented topics like RFID, XML and data on the Web.

Database Design Naphtali Rishe, 1992. This book covers the broad field of database design from the perspective of semantic modeling. Aimed at present and future designers of database applications, software engineers, systems analysts and programmers, it aims to offer a unified study of semantic, relational, network and hierarchical databases as seen through the semantic modeling approach. The book provides a structured top-down methodology of database design in all the models and presents the principal types of database languages.

Computer-aided Database Design Antonio Albano, Valeria De Antonellis, Antonio Di Leva, 1985. Hardbound. The book describes current research and development activities carried on by the DATAID research project in the area of methodology and tools for database design. The present book is divided into two parts. The first part is devoted to the description of tools that have been developed in order to support the conceptual, logical and physical design of a database application. The second part is devoted to a review of the DATAID 1 manual methodology together with reports of its experimentations and with proposals of extensions as regards distributed design and dynamics handling. Main Features of this book are: 1. Indications of the basic characteristics for a tool which supports the design activities and handles the related documentation; 2. Considerations about the role of tools with respect to methodologies; 3. Description of several advanced tools developed for the various design phases; 4. Considerations about the role of methodologies in t

Theories and Tools for Designing Application-specific Knowledge Base Data Models Mark Graves, 1993. **Algebras for Object-oriented Query Languages** Scott L. Vandenberg, 1993. Abstract. Algebraic query processing and optimization for relational databases is a proven and reasonably well understood technology. This thesis presents a data model and query language that were developed in part to facilitate the study of algebraic query processing and optimization for advanced data models. It also continues the evolution of the algebraic paradigm by presenting operators and transformation rules that correspond to this data model and thus extend the paradigm in several directions. Additional research into algebraic constructs is also presented. This work was done in the context of a newer system that provides even more features than the previous one. A comprehensive survey of database algebras is included to help place the work in perspective.

Tutorial--data Base Management in the 1980's James A. Larson, 1981. **Computer Hardware Description Languages and Their Applications** John A. Darringer, F. J. Rammig, 1990. Languages for precisely describing the behavior of computers have been studied since the conception of the computer itself. As the computer industry has grown so has the need to exchange
