Bennett,2018-07-05 The information revolution has brought with it the technology for easily collecting personal information about individuals a facility that inherently threatens personal privacy Colin J Bennett here examines political responses to the data protection issue in four Western democracies comparing legislation that the United

States Britain West Germany and Sweden forged from the late 1960 s to the 1980 s to protect citizens from unwanted computer dissemination of personal information Drawing on an extensive body of interviews and documentary evidence Bennett considers how the four countries each with different cultural traditions and institutions formulated fair information policy He finds that their computer regulatory laws are based on strikingly similar statutory principles but that enforcement of these principles varies considerably the United States relies on citizen initiative and judicial enforcement Britain uses a registration system Germany has installed an ombudsman and Sweden employs a licensing system Tracing the impact of key social political and technological factors on the ways different political systems have controlled the collection and communication of information Bennett also deepens our understanding of policymaking theory Regulating Privacy will be welcomed by political sciences especially those working in comparative public policy American politics organization theory and technology and politics political economists information systems analysts and others concerned with issues of privacy
