Advances In Optimization And Parallel Computing:

Advances in Optimization and Parallel Computing Panos M. Pardalos, 1992 Optimization and parallel computing are areas of research characterized by an extremely rapid development during the last three decades The main purpose of this volume is to show the reader a variety of optimization methods and related aspects of parallel computing techniques The diversity of topics discussed in the book cover a broad spectrum of recent developments in these areas This book which grew out of many contributions given by distinguished researchers in honour of the 70th birthday of J B Rosen one of the pioneers in optimization is intended to serve as a guide for recent literature and as a stimulant to further research on optimization and parallel computing

Parallel Scientific Computing and Optimization Raimondas Ciegis, David Henty, Bo Kågström, Julius Žilinskas, 2008-11-21 Parallel Scientific Computing and Optimization introduces new developments in the construction analysis and implementation of parallel computing algorithms This book presents 23 self contained chapters including survey chapters and surveys written by distinguished researchers in the field of parallel computing Each chapter is devoted to some aspects of the subject parallel algorithms for matrix computations parallel optimization management of parallel programming models and data with the largest focus on parallel scientific computing in industrial applications This volume is intended for scientists and graduate students specializing in computer science and applied mathematics who are engaged in parallel scientific computing

Parallel Computing in Optimization A. Migdalas, Panos M. Pardalos, Sverre Storøy, 2013-12-01 During the last three decades breakthroughs in computer technology have made a tremendous impact on optimization In particular parallel computing has made it possible to solve larger and computationally more difficult problems This volume contains mainly lecture notes from a Nordic Summer School held at the Linköping Institute of Technology Sweden in August 1995 In order to make the book more complete a few authors were invited to contribute chapters that were not part of the course on this first occasion The purpose of this Nordic course in advanced studies was three fold One goal was to introduce the students to the new achievements in a new and very active field bring them close to world leading researchers and strengthen their competence in an area with internationally explosive rate of growth A second goal was to strengthen the bonds between students from different Nordic countries and to encourage collaboration and joint research ventures over the borders In this respect the course built further on the achievements of the Nordic Network in Mathematical Programming which has been running during the last three years with the support of the Nordic Council for Advanced Studies NorFA The final goal was to produce literature on the particular subject which would be available to both the participating students and to the students of the next generation

High Performance Algorithms and Software in Nonlinear Optimization Renato de Leone, Almerico Murli, Panos M. Pardalos, Gerardo Toraldo, 2013-12-01 This book contains a selection of papers presented at the conference on High Performance Software for Nonlinear Optimization HPSN097 which was held in Ischia Italy in June 1997 The rapid progress of computer technologies including new parallel architectures has stimulated a large amount of research devoted to building software environments and defining algorithms able to fully exploit this new computational power In some sense numerical analysis has to conform itself to the new tools The impact of parallel computing in nonlinear optimization which had a slow start at the beginning seems now to increase at a fast rate and it is reasonable to expect an even greater acceleration in the future As with the first HPSNO conference the goal of the HPSN097 conference was to supply a broad overview of the more recent developments and trends in nonlinear optimization emphasizing the algorithmic and high performance software aspects Bringing together new computational methodologies with theoretical advances and new computer technologies is an exciting challenge that involves all scientists willing to develop high performance numerical software This book contains several important contributions from different and complementary standpoints Obviously the articles in the book do not cover all the areas of the conference topic or all the most recent developments because of the large number of new theoretical and computational ideas of the last few years

Advances in Randomized Parallel Computing Panos M. Pardalos, Sanguthevar Rajasekaran, 2013-12-01 The technique of randomization has been employed to solve numerous problems of computing both sequentially and in parallel Examples of randomized algorithms that are asymptotically better than their deterministic counterparts in solving various fundamental problems abound Randomized algorithms have the advantages of simplicity and better performance both in theory and often in practice This book is a collection of articles written by renowned experts in the area of randomized parallel computing A brief introduction to randomized algorithms In the analysis of algorithms at least three different measures of performance can be used the best case the worst case and the average case Often the average case run time of an algorithm is much smaller than the worst case For instance the worst case run time of Hoare's quicksort is $O(n^2)$ whereas its average case run time is only $O(n \log n)$ The average case analysis is conducted with an assumption on the input space The assumption made to arrive at the $O(n \log n)$ average run time for quicksort is that each input permutation is equally likely Clearly any average case analysis is only as good as how valid the assumption made on the input space is Randomized algorithms achieve superior performances without making any assumptions on the inputs by making coin flips within the algorithm Any analysis done of randomized algorithms will be valid for all possible inputs
