Zomaya, 1996 With over 1 000 pages and a wealth of illustrations and data tables this handbook offers readers the first information source with the scope to encompass the parallel and distributed computing revolution Written by an international team of experts the book summarizes the current state of the art interprets the most promising trends and spotlights commercial applications

**Parallel Algorithms for Matrix Computations** K. Gallivan, M. Heath, E. Ng, B. Peyton, R. Plemmons, J. Ortega, C. Romine, A. Sameh, R. Voigt, 1990-01-01 Describes a selection of important parallel algorithms for matrix computations Reviews the current status and provides an overall perspective of parallel algorithms for solving problems arising in the major areas of numerical linear algebra including 1 direct solution of dense structured or sparse linear systems 2 dense or structured least squares computations 3 dense or structured eigenvalue and singular value computations and 4 rapid elliptic solvers The book emphasizes computational primitives whose efficient execution on parallel and vector computers is essential to obtain high performance algorithms Consists of two comprehensive survey papers on important parallel algorithms for solving problems arising in the major areas of numerical linear algebra direct solution of linear systems least squares computations eigenvalue and singular value computations and rapid elliptic solvers plus an extensive up to date bibliography 2 000 items on related research      *Soft Computing and Intelligent Systems* Madan M. Gupta, 1999-10-28 The field of soft computing is emerging from the cutting edge research over the last ten years devoted to fuzzy engineering and genetic algorithms The subject is being called soft computing and computational intelligence With acceptance of the research fundamentals in these important areas the field is expanding into direct applications through engineering and systems science This book covers the fundamentals of this emerging field as well as direct applications and case studies There is a need for practicing engineers computer scientists and system scientists to directly apply fuzzy engineering into a wide array of devices and systems

**New Parallel Algorithms for Direct Solution of Linear Equations** C. Siva Ram Murthy, K. N. Balasubramanya Murthy, Srinivas Aluru, 2000-10-30 Rather than parallelizing sequential algorithms the authors develop new back substitution free parallel algorithms using a bidirectional elimination technique for the solution of both dense and sparse linear equations They provide full coverage of bidirectional parallel algorithms based on Gaussian elimination LU factorization Householder reductions and modified Gram Schmidt orthogonalization Givens rotations sparse Cholesky factorization and sparse factorization clearly demonstrating how the bidirectional approach allows for improved speedup numerical stability and efficient implementation on multiprocessor systems Plus the book offers a useful survey of the vast

literature on direct methods introductory material on solving systems of linear equations and exercises It is an invaluable resource for computer scientists researchers in parallel linear algebra and anyone with an interest in parallel programming  
BOOK JACKET     **Forecast Error Correction using Dynamic Data Assimilation** Sivaramakrishnan

Lakshmivarahan, John M. Lewis, Rafal Jabrzemski, 2016-10-21 This book introduces the reader to a new method of data assimilation with deterministic constraints exact satisfaction of dynamic constraints an optimal assimilation strategy called Forecast Sensitivity Method FSM as an alternative to the well known four dimensional variational 4D Var data assimilation method 4D Var works with a forward in time prediction model and a backward in time tangent linear model TLM The equivalence of data assimilation via 4D Var and FSM is proven and problems using low order dynamics clarify the process of data assimilation by the two methods The problem of return flow over the Gulf of Mexico that includes upper air observations and realistic dynamical constraints gives the reader a good idea of how the FSM can be implemented in a real world situation
