

Creativity, Intelligence, and Personality: A Critical Review of the Scattered Literature

MARK BATEY

ADRIAN FURNHAM

University College London

ABSTRACT. The authors examined the relations among intelligence, personality, and creativity. They consider the concept and definition of creativity in conjunction with the qualifications that researchers in the field have suggested. The present authors briefly refer to historiometric studies but focus on psychometric intelligence and its relations to tests of divergent thinking (DT) and ratings of creativity. The authors consider the relation between personality and creativity in the context of Eysenckian 3-factor and 5-factor models of personality and with reference to DT tests and ratings of creativity. The authors also present recommendations for the future study of creativity.

Keywords: creativity, divergent thinking, fluency, intelligence, originality, personality

THE CULTURAL VALUE PLACED ON CREATIVITY in the arts, sciences, technology, and political endeavors is immense. Creative people have received adulation throughout history (Nettle, 2001). Some researchers have argued that creativity constitutes humankind's ultimate resource (Toynbee, 1964). Social and technical innovation rely heavily on creative people and processes (Runco, 2004). Yet, despite creativity's undisputed importance, psychological research regarding creativity remains an academic backwater.

Numerous researchers have commented on the relative paucity of either good creativity studies (Guilford, 1950; Sternberg & Lubart, 1999) or parsimonious theories that explain the origin and manifestation of creative behavior in certain individuals. The cause of this neglect may be attributable in part to the historical background of the construct or, more particularly, to problems with definition and therefore measurement. Perhaps what has set back the field for so long has been the relative absence of comprehensive and high-quality measures
