Clarinet Mind Mapping Paul Masterdon,2022-04-07 This book is part of a much wider system that I have devised called Music Mnemonics I recognise not everybody may need or want the complete system which is why I have brought out this clarinet fingering chart separately as a standalone book each page covering an individual note How this differs from other fingering charts is that it is designed the way the brain actually thinks the right way around Now you can see in your mind how YOU would play the notes not see how someone else would play them when in front of you It s also done in the same order of the chromatic scale The issue with other clarinet charts is that they are not player focused they are audience focused depicting the fingerings the wrong way around A learner has to do mental gymnastics by translating and then reversing what can be complicated pictures in their mind before seeing the note on their instrument It s a long winded way of going about things Why go through all that pain when you don t have to Learn as the brain thinks the first time around and then watch your playing go stratospheric as a result Contains the common fingerings from bottom E right up to high A way up in the ledger lines
