Classical Algebra Third Edition:

A Concrete Introduction to Higher Algebra Lindsay N. Childs, 2008-11-26 This book is an informal and readable introduction to higher algebra at the post calculus level The concepts of ring and field are introduced through study of the familiar examples of the integers and polynomials The new examples and theory are built in a well motivated fashion and made relevant by many applications to cryptography coding integration history of mathematics and especially to elementary and computational number theory The later chapters include expositions of Rabin's probabilistic primality test quadratic reciprocity and the classification of finite fields Over 900 exercises are found throughout the book **The Athenaeum**, 1856

Cryptography and Error Correction Lindsay N. Childs, 2019-04-18 This text presents a careful introduction to methods of cryptology and error correction in wide use throughout the world and the concepts of abstract algebra and number theory that are essential for understanding these methods The objective is to provide a thorough understanding of RSA Diffie Hellman and Blum Goldwasser cryptosystems and Hamming and Reed Solomon error correction how they are constructed how they are made to work efficiently and also how they can be attacked To reach that level of understanding requires and motivates many ideas found in a first course in abstract algebra rings fields finite abelian groups basic theory of numbers computational number theory homomorphisms ideals and cosets Those who complete this book will have gained a solid mathematical foundation for more specialized applied courses on cryptology or error correction and should also be well prepared both in concepts and in motivation to pursue more advanced study in algebra and number theory This text is suitable for classroom or online use or for independent study Aimed at students in mathematics computer science and engineering the prerequisite includes one or two years of a standard calculus sequence Ideally the reader will also take a concurrent course in linear algebra or elementary matrix theory A solutions manual for the 400 exercises in the book is available to instructors who adopt the text for their course [The Oxford Handbook of the History of Mathematics](#) Eleanor Robson, Jacqueline Stedall, 2009 This handbook explores the history of mathematics addressing what mathematics has been and what it has meant to practise it 36 self contained chapters provide a fascinating overview of 5000 years of mathematics and its key cultures for academics in mathematics historians of science and general historians **Selected Papers on Algebra and Topology by Garrett Birkhoff** J.S. Oliveira, G.-C. Rota, 1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historical background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of each paper reprinted there and to indicate later

developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928-32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallee Poussin s beautiful Cours d Analyse Infinitesimale Hausdorff s Grundz ge der Mengenlehre and Frechet s Espaces Abstraits In addition I discovered Caratheodory s 1912 paper Vber das lineare Mass von Punktmengen and Hausdorff s 1919 paper on Dimension und Ausseres Mass and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV
